

How our IoT Platform works

01 Attach

Attach BLE Beacons to your existing assets.

Thinaer's enterprise grade BLE Beacons are built to transform your existing assets into smart and connected devices. Monitor temperature, humidity, leakage, and location in real-time.

02 Capture

Gateways gather & collect asset data from Beacons.

Built to work with virtually any BLE device or technology, Thinaer's gateways detect and collect data from your assets and contextualizes it to help you gain a deeper understanding of your organization.

03 Monitor

Monitor & view your data via our real-time application.

Uncover new insights into your business processes to discover patterns, calculate future demands, and forecast production requirements. Manage your assets, set trigger alerts, and access breadcrumb trails. Thinaer Restful API connects to your own platform.

04 Act

Act on key insights to improve organizational goals.

Gain visibility into inventories to optimize supply and reduce costs from misplaced assets. Know when to deploy resources for predictive maintenance to minimize equipment failures. Gain insights into usage patterns to accurately track equipment deterioration.
