

## Transform your operations with a fully intelligent IoT platform.

Thinaer's fully intelligent IoT solution integrates machine data and employee feedback into a single platform. Using machine learning, AI, and advanced analytics, we transform that data to provide actionable insight—resulting in process optimization, improved efficiency, and long-lasting digital transformation.

### Solutions

Improve workflows, increase productivity, and reduce operational costs with our fully intelligent IoT platform.

**Predictive Maintenance**

**Location Services**

**Air Quality Monitoring**

**Pressure Sensing**

**Supply Chain Logistics**

**Cold Chain Monitoring**

**Workflow Improvement**

**Knowledge Capture**

**Process Optimization**

### Leading-Edge Technology

Capture thousands of data points per second with highly-accurate BLE technology.

Easily access data through a user-friendly interface and robust APIs.

Realize cost-saving opportunities with a hardware and cloud agnostic platform.

Capture critical employee knowledge with our SaaS feedback tool.

**SECURITY & COMPLIANCE**

**MONITORING**

**EXCEPTION MANAGEMENT**

**LOGGING**

## Advanced Analytics & Consulting

---

**We support every technology implementation with a user adoption strategy, analytics, and change management.**

### **Advanced Analytics & Predictive Modeling**

Our approach to strategic analytics reporting is far more than exporting a simple Excel file; we go deep into connecting data and feedback exchanged through our platform to your performance on key metrics and areas of focus. Our analytics team performs detailed trend analysis using highly advanced statistical modeling and proprietary algorithms. Analytics insights are expressed using highly customized visualizations, which are combined with recommended courses of action. Our strategic analytics services are delivered by Thinaer's PhD senior consultants, who are experts in the areas of process improvement, digital transformation, and change management. The debrief sessions facilitated by our team are delivered in an executive training-style format, so that your associates not only learn key insights, but are equipped with practical tools and frameworks that they can implement immediately.

### **Business Process Redesign**

We put together field research teams to assess, evaluate, and diagnose issues with business processes, systems, and organizational alignment. Moreover, as an implementation partner, Thinaer will offer tactical support, assisting with the execution, adoption and sustainment of new business processes and ways of working.

### **Technology-Enabled, Data-Driven Change Management**

Thinaer's change model helps you adopt a listen-first, adaptive approach to digital transformation and technology implementation—leading to lasting, high-impact change that employees embrace. Our change model uses our SaaS feedback tool to capture employee sentiment, knowledge, and input. Our change management process adapts to multiple frameworks, so we are flexible and positioned to work within a variety of environments.

Thinaer offers the only “emotionally intelligent” IoT solution by integrating machine data and real-time human insight into a single platform. With advanced analytics and consulting services, we support technology implementation, adoption, and integration at scale. Our solution tells you what’s happening and what to do about it—helping Fortune 500 firms improve efficiency, workflows, and operational performance.
